

Delivering Profits Through Mobility

Jargon Software in a Nutshell

- Jargon Software offers mobile software to integrate sales-order processing, inventory, field service, and inspections for small and large companies.
- Jargon provides the fastest and easiest way to develop and deploy connected or disconnected mobile business applications linked to any back office software.
- Jargon's open design runs on any Windows or Windows Mobile PDA, scanner, smart phone, netbook, notebook, or tablet.
- Our mobile software works well in any industry and for almost any application.
- Jargon Software provides complete applications, application "templates" along with full customization, installation, training, and support.
- Our open, award-winning technology allows fast development and no deployment overhead.
- We provide expedited implementation, and customization to meet your requirements.

Jargon Software **Forcefield™ For Business** was developed for any business with:

A deployed workforce in the field required to fill out forms or paperwork and that data is re-entered into their back office application.

A need for remote access of inventory, catalogs, updates, etc...

Jargon Software offers mobile software for:

Order Entry, Field Service, Inspection, Inventory, AND **FOR YOUR BUSINESS!**
